

How to use your air curtain.

We have created a quick “how to” overview for you to keep to hand to ensure you get the best out of your air curtain. The manual will also still be needed, but this guide will help you with the basic product operation.

Our team are here to help, if you have any other questions. Contact them on **+44 (0) 24 7638 4646** or send an email to **service@thermoscreens.com**. You can also check out our FAQ section on the website, thermoscreens.com/faqs.

4 simple steps.

1. On/off switch
2. Automatic mode
3. Heater level controls
4. Fan speed

Switching the unit on/off

Turns the air curtain on or off. If your unit is electric, and the unit is heating when switched off the fan will run-on for approx. 2 minutes to dissipate heat.

Changing the temperature

In Auto mode (indicated by the LED light being on (2)) to set the temperature, press the up/down arrows until the LED lights on the scale (3) are at the level you require.

The controller will then regulate the air curtains heat output automatically according to the set temperature. If you just want constant heat, make sure that the “Auto” button is switched off. You can only set the heating from no heat, half or full heat. This will also show on the LED lights (3).

Changing fan speed

You can switch between low, medium and high depending on your requirement. The LED lights will show which you have selected.

Your environment is our expertise.

Thermoscreens were one of the pioneers of modern air curtain technology, and we remain at the forefront of its evolution today. Our sales team work hand-in-hand with an international network of distributors, providing solutions to customers of all types and sizes, in more than 50 countries. Across the globe, our name is synonymous with the highest quality standards; our products renowned for their energy efficiency, reliability and ease of use.
